THE SHIFT

Commerce is moving inside the AI apps consumers already use.

OpenAI now hosts dedicated **ChatGPT Apps** that let users discover, compare, and shop a retailer's catalog directly inside the chat. Google is building branded shopping into Gemini through its **Business Agent.** Perplexity has made conversational checkout native. For retailers, this is not a feature to watch. It is a new storefront to show up in.

THE SIGNAL

~64%
of AI assistant usage in Israel goes through ChatGPT
StatCounter, 2026 ↗

84M
shopping questions per week on ChatGPT, in the US alone
Stackline, Nov 2025 ↗

66%
of shoppers ready to use AI assistants to help them buy online
Retail Technology Review, Feb 2026 ↗

WHY GROCERY

Grocery shoppers arrive in chat with a need, not a search query. They come higher in the funnel, where the AI does the reasoning: breaking the need into products, suggesting alternatives, identifying cross-sell opportunities, and building a broader basket. **That is why grocery is already one of the most active early categories in AI commerce.**

FISHBONE

Connecting retailers' commerce ecosystems to the AI platforms consumers consolidate around.

Consumers increasingly use AI assistants as personal butlers, for planning, research, and purchasing. The trend is consolidation toward these platforms. Fishbone connects a retailer's brand, voice, and catalog into this shift so they show up where customers are already shopping, enabling everything from product discovery and retrieval to basket construction to checkout, all on top of the retailer's existing infrastructure. Nothing gets replaced. The grocer stays in control.

We start where the momentum is strongest: ChatGPT Apps, the most mature instance of this shift, expanding across other AI surfaces as they emerge.
